Cincinnati, OH | (513) 338-9801 | kosanaraghusai@gmail.com | [in RaghuSai](#) | [raghusai-09](#) | [Portfolio](#)

About

Full-stack developer with hands-on experience in building and deploying web apps using MERN, Python, and cloud services. I enjoy crafting user-friendly solutions-whether it's a chatbot for medical queries or an AI-powered summarizer. I'm comfortable with both frontend and backend development, love solving real-world problems, and am always open to learning new tools.

Skills

- **Languages:** C++, C, Java, HTML, CSS, Python, SQL, JavaScript, Typescript
- **Technologies:** TensorFlow, PyTorch, Scikit-learn, OpenCV, React.js, Node.js, Express.js, Redux, MongoDB, MySQL, Next.js, scikit learn, opencv, Pandas, Numpy, Vue.js
- **Tools:** Git, Streamlit, REST APIs, Tailwind CSS, Netlify, Vercel, Github Pages

Work Experience

Phamax.ch | *Full Stack Developer*

Jun 2024 - Dec 2024

- Designed and deployed a medical chatbot using Microsoft SDK Bot Framework, Python, and REST APIs, serving 500+ users and improving patient query resolution time by 40%
- Applied NLP and semantic analysis techniques to increase response accuracy by 30%, enhancing human-computer interaction.
- Automated conversation data export, reducing reporting effort by 10+ hours monthly-demonstrating practical AI deployment and systems optimization.

VOIS | *Software Engineer.*

Jun 2022 - Nov 2022

- Developed an Email Spam Detection System using ML classifiers (Naive Bayes, Logistic Regression), achieving 95% precision on 50k+ email samples.
- Published a research paper on comparative performance of ML algorithms in spam detection, highlighting contributions to Document Intelligence and Content Classification.
- Deployed a real-time spam detection app with Streamlit + Scikit-learn, cutting manual review time by 40% and demonstrating AI-to-product integration.

1Stop.ai(Personify) | *AI Engineer*

Oct 2020 - Jun 2021

- Developed ML/DL models for object recognition, handwritten digit classification, and Fake News categorization, achieving over 90% precision on diverse datasets.
- Applied CNNs, Logistic Regression, and feature extraction techniques to improve predictive modeling and reproducibility.
- Documented model pipelines and performance metrics to support reproducibility and effective collaboration with cross-functional teams.

Projects

AI Article Summarizer | [Summarizer](#)

- Developed an AI-powered summarizer that extracts and condenses web articles using OpenAI and REST APIs. Designed using the MERN stack.
- The solution was deployed via GitHub Pages for seamless user accessibility.

Machine Learning Projects

- Object Recognition with CNN + OpenCV – Achieved 92% accuracy on custom dataset
- Handwritten Digit Classification (CNN, MNIST dataset) – Reached 98% test accuracy.
- News Classification (NLP with Logistic Regression, TF-IDF) – Improved F1-score by 12% over baseline.

Dalle_Clone | [Dalle](#)

- Developed an image generating platform using OpenAI API's, integrated with React(Vue JS), styled with tailwindcss and backend authorized by using Express.
- User can generate images by using the prompt, and post their content to the community.

Education

University of Cincinnati - Main Campus

Aug 2024 - Present

Masters of Engineering, Computer Science (GPA: 3.93/4.0)

- **Coursework:** NLP, Advanced ML Techniques, Advance Algorithms, Distributed OS, Software Testing Q&A

SRM University - AP

Sep 2020 - May 2024

Bachelors of Technology, Computer Science (GPA: 8.88/10.0 || 3.75/4.0)

- **Coursework:** AI, Machine Learning, Deep Learning, Database Management, Data Mining & Warehousing, Software Engineering
